Aromatic and Mannich polyols from Cardanol
ExaPhen for rigid PUR Insulation

Typical Applications

Rigid PUR Spray Foam & Incontinuous panels or blocks.
Excellent for cold temperature adhesion to walls and roofing. Improves significantly re-resistance and compressive strength
(see case studies on page 3). Maximises closed-cells content percentage and improves dimensional stability — ideal for a long-lasting and efficient insulation. Offers hydrophobicity.

Products: XFN 150 and 425 Mannich.

For the Insulation of entire buildings, roofing and flooring, air barriers, posts and beams construction, sealants, cavity walls, door & wall panels, refrigeration units, maritime structures, spas/tubs/showers and tanks and pipes.

Rigid PUR Pour in place foam & Indiscontinuous panels or blocks.
Maximises closed-cells content percentage and improves dimensional stability — ideal for a long-lasting and efficient insulation. Improves compressive strength (see example page 3). Excellent for cold temperature adhesion. Offers hydrophobicity.

Products: XFN 50 and 53 Multifunctional Aromatic.

For the Insulation of entire buildings, wall exteriors and cavities, door & wall panels, refrigeration units, maritime structures, and tanks and pipes.

PIR Panels or Blocks
and In-place foam: Maximises closed-cells content percentage and improves dimensional stability — ideal for a long-lasting and efficient insulation.

It brings to the plasticisation of the final foam (lowers the stiffness and increases ductility) and reduces the resulting foam-dust. Hydrophobicity. Products: XFN 10 and 50 aromatic.

For the Insulation of roofing and flooring, air barriers, posts and beams construction, exterior walls, SIP construction panels, refrigeration units, maritime structures, and residential sheathing.

Polycard XFN is a family of aromatic multifunctional polyols and amine polyols used in polyurethane based rigid foams, in durable coatings, adhesives and sealants, as well as a hardener for castings.

Elmira Industrial Supplies proudly distributes ExaPhen™, a family of resins sourced from non-edible bio-feedstock for the polyurethane market. Exaphen™ includes raw materials supply such as polyols or formulated PUR foam systems (insulation or structural reinforcement). The ExaPhen™ technology is devoted to the responsible re-use of agricultural byproducts, extracting(exa) phenolic(phen) resins from biomasses while retaining the special properties which nature has already engineered. The unique chemical structure gives our resins a high degree of formulation versatility, enhanced moisture absorption and flame resistance, low exothermic reactions, lower density and increased dimensional stability.
General Properties

- High Dimensional Stability
- Low exotherm
- Increased flame and temperature resistance
- Excellent adhesion to most substrates from minus °C
- Lambda from 0.22 mW/msq
- Increased resistance to moisture absorption
- High miscibility with traditional polyols, isocyanates, surfactants, catalysts, and blowing agents
- Wide range of formulations
- High Bio-content

1 Biobased Determination using C-14 test ASTM-D6866-08. *CALCULATED
2 GWP is the total amount of equivalents of Carbon Dioxide released. Determined through a cradle to gate LCA following ISO 14040 Series Standards.
Case Studies

Spray PIR for Walls Insulation

PIR Spray for Exterior Walls:

Volume: 1:1.8
XFN50 and XFN53 with ratio 1:0.26 (overall 30%) Polyether Polyols HFC/Water TCPP Lambda: 22.8 mW/K.m Strength (vertical): 189 KPa Strength (horizontal): 284KPa Cream time: 4-5 sec String time: 20 sec Specific Gravity (PartB): 1084 g/l Density (sprayed): 48 kg/m3

How we improved the performance:

Dimensional Stability (100 ºC, 24h):
Avg. 0.87% vs Avg. 1.41%
DIN EN 1605 (7days @ 40KPa and 70ºC):
1.5% vs 1.9%
Water Absorption:
0.037 vs 0.056 kg/m2
Anti-fire B2, DIN4102:
(12cm vs 15cm)
Spray rate:
8-9cm vs 4cm thick layer per session
Bio properties:
Final Foam Bio-content: 20.5% (calc.)
Case Studies

Spray Pipe insulation Polycard XFN-150

40 parts Polycard XFN-150 | 60 parts polyether-polyol/ glycerol-based polyols.
10—20 parts phosphate ester flame retardant | 1.5—2.5 parts water 3—5 parts catalyst (tin-based and tertiary amine) | 10—14 parts blowing agent.
Cream time: 4—7 sec
String time: 12—18 sec
Density (sprayed): 56 kg/m³
Density (free rising): 35 kg/m³

Improvement in mechanical, FR & Bio properties:
Compressive strength at yield: 392.3± 3.86 KPa (0.4 MPa) (↑ 24%)
Strain at yield: 3.7±0.5 (↑ 32%)
Modulus: 11.66±1.82 MPa (12 MPa) (↑ 25%)
FR Test DIN4102: B1(difficult to ignite/often self extinguishing)
Foam Bio-content: 13.5% (calculated)
DIN4102/BS 476

XFN-150 formulation

Original formulation
High Functionality Aromatic Polyols

XFN 50 is a medium viscosity polyol with a 4 of functionality that can replace aromatic polyether and polyester polyols. It is recommended for both PIR and PUR rigid foams.

XFN 53 is a high viscosity, high functionality polyol that can be used as an additive for increased flame resistance, dimensional stability and low exothermic release in rigid foam formulations.

Mannich Amine Polyols

XFN 150 is bio renewable version of the common 530-OH# mannich. Designed primarily for spray foam formulation, it offers very fast cream time and improved cell structure, thanks to its surfactant effect. Improves re-resistance and compressive strength. Features a high degree of moisture resistance and is especially for 2k foam system. XFN 425 is a replacement with lower viscosity and OH# of the 150 mannich. Other uses include amine catalyst replacement in urethane formulations.

Specialty Polyols

XFN 10 is a polyol surfactant/plasticizing with an aromatic content of about 30%. The XFN 10 is used primarily for PIR applications for thermal insulation thanks to its plasticizing effect. Benefits are: enhanced water resistance and low brittleness. A plus is its very high Bio-Content.
